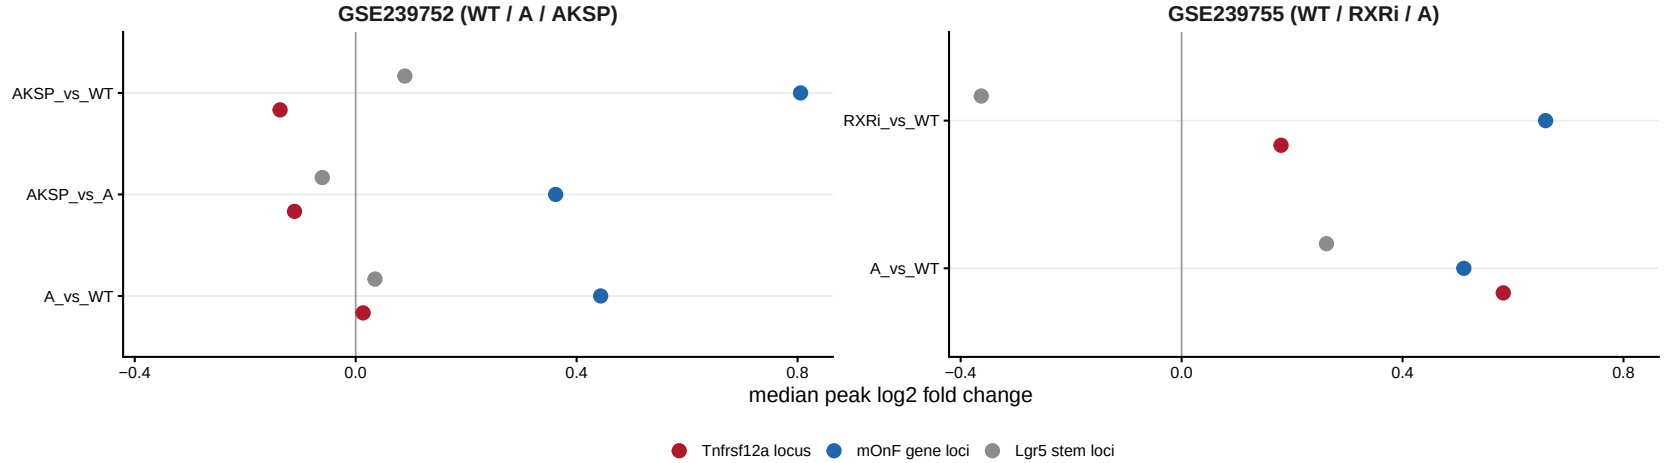
a

The oncofetal loci open in both experiments; the receptor locus in only one

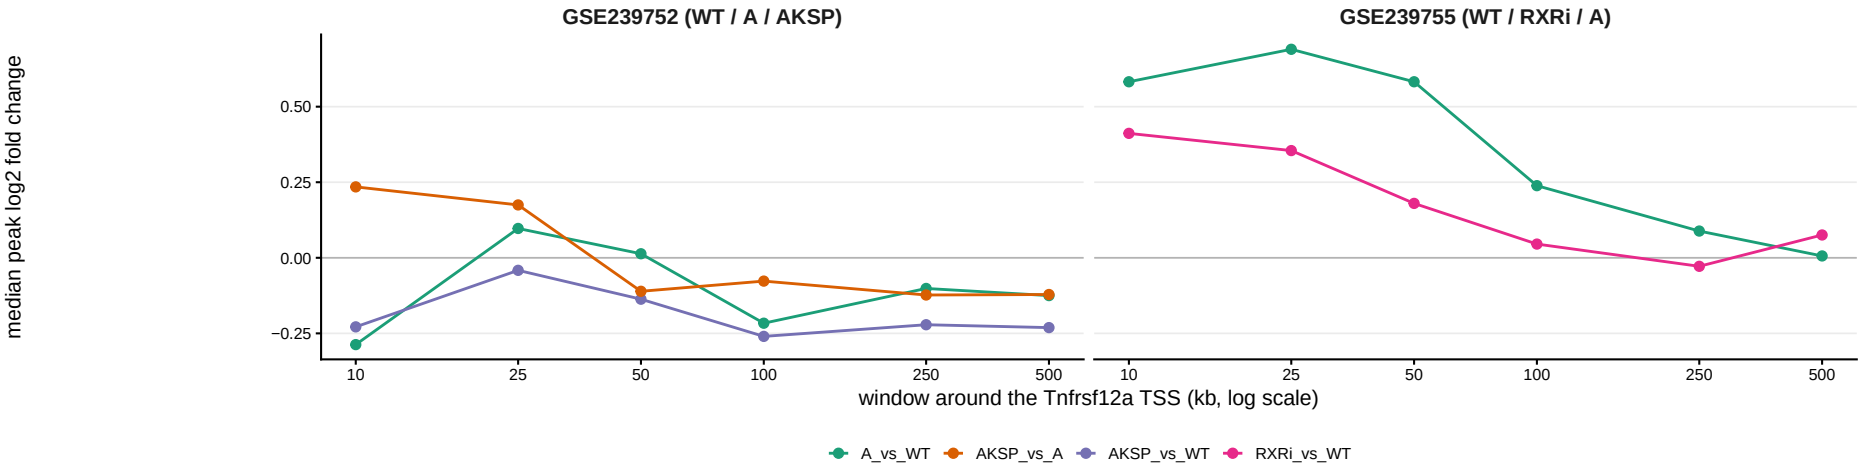
peaks within 50 kb of a TSS, against all other peaks in the same contrast



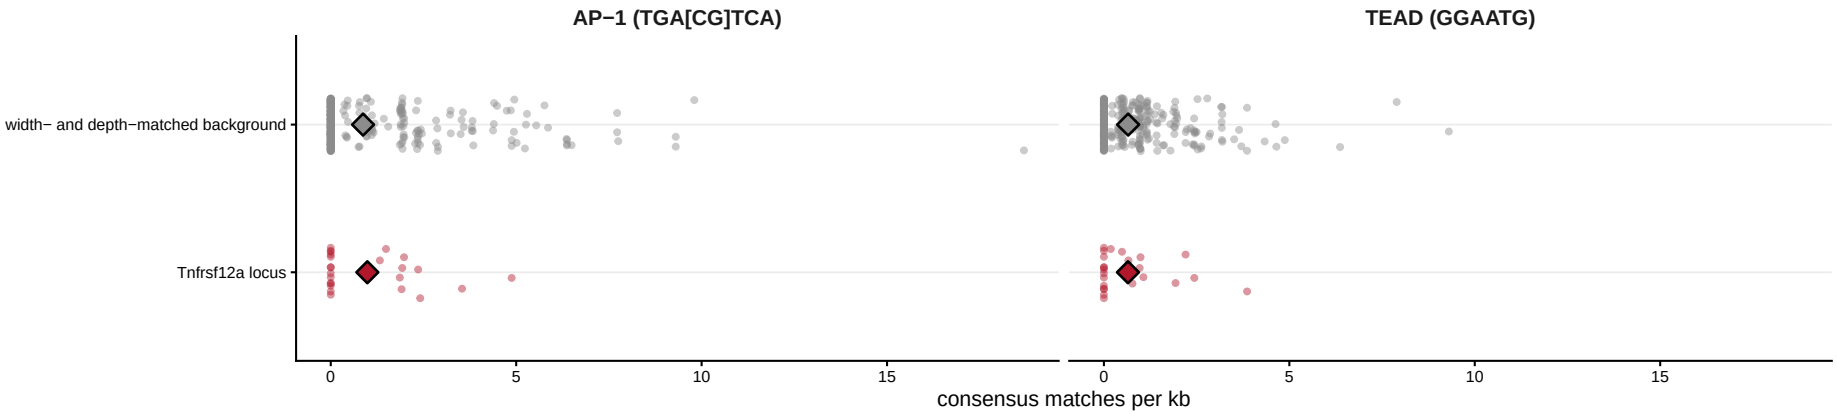
b

and the discordance is proximal, not a distal element the window missed

window size scanned as a ladder, not chosen after seeing the answer; GSE239755 opens at 10–25 kb, GSE239752 does not



c

The locus peaks carry no excess of TEAD or AP−1 consensus sites


diamonds, means; 24 locus peaks vs 408 matched background peaks
